

7000 Series WallCabinets (WCA) Cabinets

Single & Double Section.

The 7000 Series of WallCabinets (WCA) Cabinets follows our tradition of strength and robustness which characterizes this series. They are sturdy and resistant, made of a special thick steel sheet for withstanding years of use and abuse.

This 7000 Series of WallCabinets is composed of a frame, side panels and doors. It Comes packaged in three(3) boxes. These cabinets are mostly used typically in small installations where there is a mix of cabling, Switches, Routers and other active equipment made for Rack mounting or not. The 7000 Series WallCabinets comes with Fan Trays included, in order to facilitate the installation and mounting time of the product to the system's integrator. These fan trays enhance the thermal management of the units and use high quality Fans with ball bearings for a 50.000 hour MTBF long lifespan.

They are available from 6U to 27 U heights in standardized 19 inch rack and a static load of 60 Kg.

They are not designed to carry large rack mounted servers.

The 7000 Series WallCabinets (WCA) are also available with a back frame with hinges (Double section) that permits swinging the cabinet and accessing the back side, and comes with a keylock for security, these come completely assembled.

Note: If you require a small server cabinet for a SOHO application, we recommend the standup version with casters of 18U. It lets you install a small server and some cabling at low cost and with reliability.

Features

■ **Cable Management:**

LanPro WallCabinets (WCA) is provided with two cable entry points on the top and bottom of the enclosure. Plastic snap-in panels cover these slots and can be conveniently removed. For additional security, these panels can be replaced by a metal plate secured from the inside of the cabinet. The large opening normally used for fan trays or filler panels can also be used for cable entry.

■ **Thermal Management:**

Wall Cabinets do not normally have the component density which generates excess heat. Nevertheless, we have provided ventilation slots on the side panels and left an opening on the top of the enclosure. This opening can be covered with a blank panel, vented panel or a fan tray.

■ **Strength:**

Our WallCabinets (WCA) will support loads up to 60kg. Load will vary depending on your specific wall construction. LanPro tests are conducted with a cinder block wall.

■ **Installation:**

Our basic WallCabinets mounts directly to the wall via four removable brackets. For models 6U through 15U, there is a single 19" mounting rail built into the front frame. Our 18U model requires more support and comes standard with the second rear frame.
